PRODUCT REQUIREMENTS DOCUMENT

Enterprise Management Platform (EMP)

A modular platform where each organization chooses the services it needs: HR, CRM, PRM, EPM, projects, service desk, and operations

VERSION	3.1 (Modular services, hierarchy & leave rules)
PRODUCT TYPE	Multi-Tenant SaaS Enterprise Management Platform
SERVICES	Chosen per client; see Module Catalog (Section 04)
STATUS	Draft for approval
DOCUMENT DATE	October 2026

01 Product Vision

> Develop a modular, enterprise-grade management platform that lets any organization run its people, customers, partners, performance, projects, and support requests from a single integrated system, shaped around the organization's own hierarchy and rules.

The platform is configurable, so organizations define their own business processes rather than adapting to rigid, predefined software workflows. Authority in the system mirrors the real company hierarchy, from the owners down to the newest employee.

02 Objectives

- **Centralize** operations into a single source of truth.
- **Eliminate** disconnected systems and data silos.
- **Mirror** the real company hierarchy in permissions, approvals, and reporting.
- **Connect** the three relationship domains (employees, customers, partners) to one performance view.
- **Standardize** workflows while allowing custom organizational adaptations.
- **Increase** visibility through unified, role-based reporting.
- **Support** organizations of any size, from SMBs to large enterprises.
- **Scale** through a modular, microservices-ready architecture.

03 Target Industries

- Government
- Manufacturing & Logistics
- Healthcare & Education
- NGOs & Professional Services
- Financial Institutions
- Telecommunications
- Retail
- Hospitality
- Agriculture
- Construction
- Technology

04 Module Catalog & Packaging

> EMP is sold and run as separate services. Each client (tenant) chooses the services it wants. Every service must work on its own with only the always-on core and its own hard dependencies, and never assume another service is present.

Always-on core (every tenant)

Authentication, organization and hierarchy, users and roles, module entitlements, notifications, documents, the shared approval engine, the item catalog, and shared reference data (units, currencies, tax codes, payment terms).

Optional services

SERVICE	MANAGES	HARD REQUIRES	OPTIONAL INTEGRATIONS
HR	Employees, recruitment, attendance, leave, training	None	Projects (leave-aware assignment), EPM, Manufacturing (labor cost)
CRM	Leads, customers, opportunities, pipeline	None	Sales, Service Desk, PRM, CX, EPM
PRM	Partners, vendors, suppliers, resellers, agreements, partner portal, scorecards	None	CRM (referrals), Procurement, EPM
EPM	Objectives, KPIs, scorecards, review cycles	None	Every service (KPI feeds); Finance (budgets and forecasts)
Projects & Tasks	Projects, assignment, progress	None	HR, EPM
Service Desk	Internal and external tickets, SLAs	None	CRM, PRM, CX
Finance	Journals, receivables, payables, periods, financial statements	None	Receives postings from Sales, Procurement, Inventory, Manufacturing
Sales	Quotations, sales orders, deliveries, invoices	None	CRM, Inventory, Finance, CX

Procurement	Requisitions, purchase orders, receipts, supplier bills	None	Inventory, Finance, PRM, Planning
Inventory	Items by warehouse, stock ledger, valuation	None	Sales, Procurement, Manufacturing, Finance
Logistics	Shipments and tracking	None	Sales, Procurement, Inventory
Planning	Shortages, reorder suggestions	Inventory	Procurement, Manufacturing, Sales
Manufacturing	Bills of materials, routings, work orders, quality checks, production cost	Inventory	HR, Finance, Planning
CX	Surveys, feedback, customer 360 view	None	CRM, Service Desk, Sales

> **Assumption:** PRM means Partner Relationship Management and EPM means Enterprise Performance Management (objectives and KPIs). The operations services (Finance through CX) are planned; their detailed requirements will be added in a PRD addendum before they are built.

Shared data rules

- The core owns minimal shared records: **Party** (name, contacts, tax ID, addresses), the item catalog, and reference data.
- Each service adds its own profile on top of a Party. A supplier is a Party with a supplier profile and does not require PRM. A customer does not require CRM.
- **Graceful degradation:** without CRM, Sales manages its own customers; without HR, labor cost uses a manual rate; without Finance, documents work but post no journals; without PRM, supplier scorecards are hidden.
- Services communicate through typed contracts and domain events. One service never imports another's internals. Each integration is an optional adapter that activates only when both sides are enabled.

Entitlements

- Every service has a manifest listing its dependencies, optional integrations, permissions, routes, navigation entries, dashboard widgets, and KPI definitions.
- A tenant's entitlement record lists the services it has enabled. It is enforced in routing, navigation, data access, dashboards, and the central policy check, not only by hiding menu items.
- Opening a service the tenant does not have shows a "not available on your plan" screen.

- Enabling a service requires its hard dependencies. Disabling a service that others require is blocked with an explanation. Disabling keeps all data, and re-enabling restores it.
- Roles, permissions, widgets, KPIs, workflow triggers, and search results for disabled services do not appear.
- The Super Administrator toggles services per tenant; the Organization Administrator sees what is enabled.

Bundles and industry presets

Presets are default bundles of services, never hard-coded behavior. Clients can always add or remove services.

BUNDLE	TYPICAL SERVICES
People & Work	HR, Projects, EPM
Sales & Customers	CRM, Service Desk, CX
Partners & Suppliers	PRM, Procurement
Distribution & Retail	Sales, Procurement, Inventory, Logistics, Finance
Manufacturing	Inventory, Manufacturing, Planning, Procurement, Sales, Finance, HR
Full suite	All services

> Pricing and billing are not part of this document. Entitlement is a set of flags per tenant.

05 Company Hierarchy & Roles

EMP models the full chain of authority in a company, from ownership to junior staff. Each organization switches on only the layers it uses, so a small business can run flat while a large one uses every level.

Full company hierarchy

```
Board of Directors / Owners
 |
Chief Executive Officer (CEO) / Managing Director
 |
 |-- Executive Team (C-level)
 |     COO (operations), CFO (finance), CTO (technology),
 |     CHRO (people), CMO / Sales Director (market)
 |
 |-- Heads of Department / Directors
 |     Finance, IT, Sales, Operations, Marketing, etc.
 |      |
 |      |-- Managers (mid-level, run a function inside the department)
 |      |    |
 |      |    |-- Supervisors / Team Leads (run a small team day to day)
 |      |    |    |
 |      |    |    \-- Employees (specialists, officers, assistants)
 |      |    |         \-- Junior staff, interns, trainees
 |
 \-- HR (sits beside the departments and serves all of them)
```

Mapping to EMP roles

COMPANY LEVEL	EMP ROLE	SCOPE AND RESPONSIBILITIES
Your company (SaaS owner)	**Super Administrator**	Platform level: manages tenants, plans, feature flags. Not part of any tenant's daily work.
Board / Owners / CEO	**Organization Administrator**	Configures the organization, creates departments, appoints Heads of Department, sees all dashboards. Owners or the Board may be recorded as read-only approvers for CEO-level requests.

Executive team (C-level)	**Executive**	Organization-wide visibility, EPM objectives and scorecards, senior approvals for long or special leave.
Head of Department / Director	**Head of Department**	One per department. Creates projects and tasks, assigns work, **gives line approval on leave**, owns department KPIs.
Managers	**Manager** (optional)	Runs a function inside a department. Can assign tasks and give line approval for their reports when enabled.
Supervisors / Team Leads	**Team Lead** (optional)	Day-to-day task assignment and first-line leave recommendation for a small team when enabled.
HR	**HR** (HR Officer, HR Head)	Serves all departments. **Verifies and records leave**, manages employee records, attendance, recruitment, and policy.
Employees, junior staff, interns	**Employee**	Completes tasks, submits leave, raises tickets, maintains own profile. Interns and trainees are Employees with restricted access flags.
Customers, applicants	**External User**	Sees only their own tickets or applications.
Vendors, suppliers, resellers	**Partner User**	Sees only their own partner workspace (PRM).

How authority flows

- **Downward (work):** Administrator appoints Heads of Department. Heads assign tasks to Employees, optionally through Managers and Team Leads.
- **Sideways (people matters):** HR serves every department and is independent of the department chain.
- **Upward (visibility):** Task progress, KPIs, and approvals roll up from Employee to Head of Department to Executive to Administrator.

06 Core Platform

Authentication & Identity

- Email/Password, SSO via OAuth2/SAML, Multi-Factor Authentication
- Password recovery and session management

Organization Management

- Multiple organizations, branches, departments, and teams with a customizable hierarchy (any of the levels in Section 05 can be enabled or hidden)
- Each department has exactly one Head of Department, appointed by the Organization Administrator
- Company branding (logos, primary colors via UI tokens) and global settings

Role-Based Access Control (RBAC)

Roles: Super Administrator, Organization Administrator, Executive, Head of Department, Manager (optional), Team Lead (optional), HR, Employee, External User, Partner User.

Permissions: Create, Read, Update, Delete, Approve, Export, Manage Users, Configure Modules.

> **Rules:** Permissions are tied to feature flags to support tiered billing. A user can hold more than one role (for example Head of Department and Employee). No user can approve their own request.

07 Human Resource Management (HR)

Employee Management

Profiles, employment history, departments, positions, reporting line, contracts, documents, emergency contacts, skills, and certifications.

Recruitment

Job vacancies, applicant tracking (ATS), interview scheduling, candidate evaluation, offer management, and conversion of an applicant to an employee.

Attendance

Clock in/out, shifts, overtime, remote attendance tracking, and reports.

Leave Management

See Section 08.

Performance Records

Individual reviews, feedback, and history. Goals and KPIs are managed in EPM (Section 11) and feed into these reviews.

Training

Training programs, enrollments, certifications, and training records.

08 Leave Management

> Leave follows the usual two-part rule: the **line approver decides** whether the work can be covered, then **HR verifies and records** that the request meets policy and balance.

Standard approval flow

STEP	ACTOR	ACTION
1	**Employee**	Submits the request with dates, leave type, and reason or supporting document if the type requires one.
2	**Line approver** (Head of Department; Manager or Team Lead if enabled)	Approves or rejects based on workload and team cover. A rejection ends the request with a reason.
3	**HR**	Verifies balance, policy, notice period, and blackout dates, then confirms and records the leave. HR may return a request to the employee for missing information.
4	**System**	Updates leave balance, team calendar, attendance, and dashboards, and notifies everyone involved.

Approval chain by requester

WHO IS REQUESTING	STEP 1: LINE APPROVAL	STEP 2: VERIFICATION
Employee, intern	Head of Department (or Team Lead / Manager)	HR
Team Lead / Manager	Head of Department	HR
Head of Department	Executive or Organization Administrator	HR
HR staff	HR Head (HR Head is the line approver for HR)	Organization Administrator
HR Head	Organization Administrator	Recorded by HR (not self-verified)
Executive / CEO	Board or owner (recorded outside the system or by designated approver)	HR records

Policy rules (configurable per organization)

- **Statutory leave** (sick, maternity or paternity, bereavement): not refusable by the line approver. HR verifies documents and records; the Head of Department is notified.
- **Notice periods:** minimum advance notice per leave type (for example 7 days for annual leave).
- **Extended or special leave** (unpaid, sabbatical): adds a senior approver (Executive or Administrator) after step 2.
- **Blackout periods** (year-end, peak season) block or flag requests.
- **Minimum staffing:** warns or blocks when too many people in one team are off at once.
- **No self-approval:** enforced by the system.
- **Escalation:** if the line approver does not respond within a set time, the request escalates to the next level up. Optional delegation lets approvers nominate a stand-in while away.
- **Legal minimums** (annual leave days, sick leave, maternity) are set per country; each tenant configures its own leave types and entitlements.

Leave statuses

Draft | Pending line approval | Pending HR verification | Approved | Rejected | Returned | Cancelled

> **Configurability:** the chain above is the default. Organizations can switch to HR-only approval or add steps through the Workflow Engine without code changes.

09 Customer Relationship Management (CRM)

Features: Lead management, customer database, contact management, sales opportunities, sales pipeline, communication logs, notes, documents, and linked tickets.

Sales Pipeline

Stages are fully configurable by each organization (for example Lead, Qualified, Proposal, Negotiation, Won/Lost).

Ownership and visibility

Each lead, customer, and opportunity has an owner. Heads of Department see their department's pipeline; Executives and Administrators see all. Customer history (deals and support tickets) lives on one record.

10 Partner Relationship Management (PRM)

PRM manages the organizations that work *with* the tenant rather than buy from it: vendors, suppliers, resellers, distributors, agencies, and contractors.

CAPABILITY	DESCRIPTION
Partner directory	Partner profiles, categories, tiers, contacts, and status
Onboarding & vetting	Application, document collection (licenses, tax, insurance), approval workflow, and expiry reminders
Agreements	Contracts, terms, renewal dates, and version history
Partner portal	Partner Users log in to see only their own agreements, tasks, tickets, and shared documents
Deal registration & referrals	Partners register leads or referrals that flow into CRM with attribution
Orders & payments tracking	Purchase or commission records and status (tracking only; accounting is out of scope)
Partner scorecards	On-time delivery, quality, response time, and revenue contribution, feeding EPM

11 Enterprise Performance Management (EPM)

EPM connects strategy to daily work by cascading objectives down the hierarchy and measuring results with live data from every other module.

CAPABILITY	DESCRIPTION
Strategic objectives	Organization-level goals set by the Executive team or Administrator (OKR style: objective plus measurable key results)
Cascading goals	Objectives break down to departments, teams, and individuals, so each person's goals link to the company's
KPIs	Defined metrics with targets, thresholds, and owners. Many are computed automatically from module data (sales won, tickets resolved, tasks completed, attendance rate, leave backlog)
Scorecards	Balanced views per organization, department, and partner
Review cycles	Scheduled reviews (quarterly, annual) with self, manager, and optional 360 feedback; results saved to the employee record in HR
Progress tracking	Check-ins, status (on track, at risk, off track), and history
Executive performance dashboard	Rolls up every level into one view of how the organization is performing against its goals

Scope note: Core EPM is performance management and has no dependencies. **Budgets and forecasts are an optional capability that appears only when Finance is enabled**, because actuals come from posted journals. Financial consolidation is not included.

12 Task & Project Management

Features: Projects, tasks, subtasks, milestones, dependencies, assignments, deadlines, time tracking, and progress monitoring.

- The **Head of Department** creates projects and tasks and assigns them to employees in their department; Managers and Team Leads can assign within their teams when enabled.
- Employees update task status; the Head of Department reviews progress.
- Approved leave appears in assignment views so work is not assigned to someone who is away.
- Task completion feeds KPIs in EPM.

Kanban | List | Calendar | Timeline | Gantt Chart

13 Ticketing / Service Desk

Supports internal requests (HR, IT, Procurement, Facilities) and external requests (Customer Support, Complaints, Product Issues, Partner Support).

Features: Ticket creation, assignment, priorities, categories, SLA management, escalation rules, comments, attachments, status tracking, and linked Knowledge Base.

14 Workflow Engine

Organizations create custom workflows without modifying application code.

> **Strategic Note:** Evaluate integrating an existing engine such as Temporal, n8n, or Celery rather than building from scratch.

COMPONENT	EXAMPLES
Triggers	Employee Created, Leave Request Submitted, Ticket Created, Partner Applied, Objective Created
Conditions	Department, User Role, Leave Type, Duration, Amount, Status, Location
Actions	Assign User, Send Notification, Update Status, Create Task, Request Approval, Generate Document

Requirements driven by the leave and hierarchy rules

- **Multi-step sequential approvals** (line approval, then HR verification, then optional senior approval).
- **Role-based and relationship-based approvers** ("requester's Head of Department", "any user with the HR role").
- **Conditional steps** (add a senior approver if leave exceeds N days or is of a special type).
- **Timeouts and escalation** to the next level up, plus approver delegation.
- **Self-approval block** and a full audit trail for every decision.

15 Document Management

Features: File upload, folders, version control, access permissions, document approval, digital signatures, and in-browser preview. **Types:** PDF, DOCX, XLSX, PPTX, images. Used by HR (contracts, medical certificates), PRM (partner agreements), and CRM (proposals).

16 Notification System

CHANNELS	TRIGGERS
Email, SMS, Push, WhatsApp Business API	Task assignments, leave decisions, approvals awaiting action, ticket updates, KPI alerts, partner document expiry, announcements

17 Reporting & Dashboards

DASHBOARD	KEY METRICS
Executive	Headcount, objective progress, KPI health, department performance, open tickets, revenue pipeline
HR	Attendance, leave requests awaiting verification, leave balances, recruitment pipeline, workforce distribution
Head of Department	Department tasks, overdue work, team availability (including approved leave), department KPIs, leave requests awaiting line approval
CRM	Leads, pipeline, conversion rates, customer growth
PRM	Active partners, expiring documents, partner scorecards, referral revenue
EPM	Objective alignment, KPI trends, review-cycle completion
Operations	Project status, SLA performance, workflow statistics

18 Multi-Tenant Architecture & Data Strategy

- **Isolation:** Shared database, shared schema, strict `tenant_id` row-level isolation
- **Enforcement:** PostgreSQL Row-Level Security (RLS) plus FastAPI middleware
- **Configuration:** Organization-level feature toggles, branding, hierarchy levels, leave policy, and independent user management
- **Entitlements:** Enabled services per tenant are enforced in routing, data access, dashboards, and the policy check (Section 04)
- **External scoping:** External Users and Partner Users are restricted to rows linked to their own customer or partner record

19 Security

- **Authentication:** JWT, OAuth2, SSO, MFA
- **Data security:** TLS 1.3 in transit, AES-256 at rest
- **Auditing:** Immutable audit logs for all create, update, delete, and login actions, including every leave decision and role change
- **Compliance:** GDPR principles (right to be forgotten, data export), SOC 2 readiness

20 Recommended Technology Stack

LAYER	TECHNOLOGY
Frontend	React.js (Vite), TypeScript, Tailwind CSS, shadcn/ui, React Query
Backend	FastAPI (Python), SQLAlchemy 2.0 (async), Pydantic
Database	PostgreSQL 15+, OpenSearch (search)
Cache & Queue	Redis, Celery
File Storage	AWS S3 or MinIO
Containers	Docker; Docker Compose (early phases), Kubernetes (production)

21 API Standards

- RESTful APIs documented via OpenAPI (auto-generated by FastAPI), validated with Pydantic
- Authentication: `Authorization: Bearer <JWT_TOKEN>`

Example endpoints

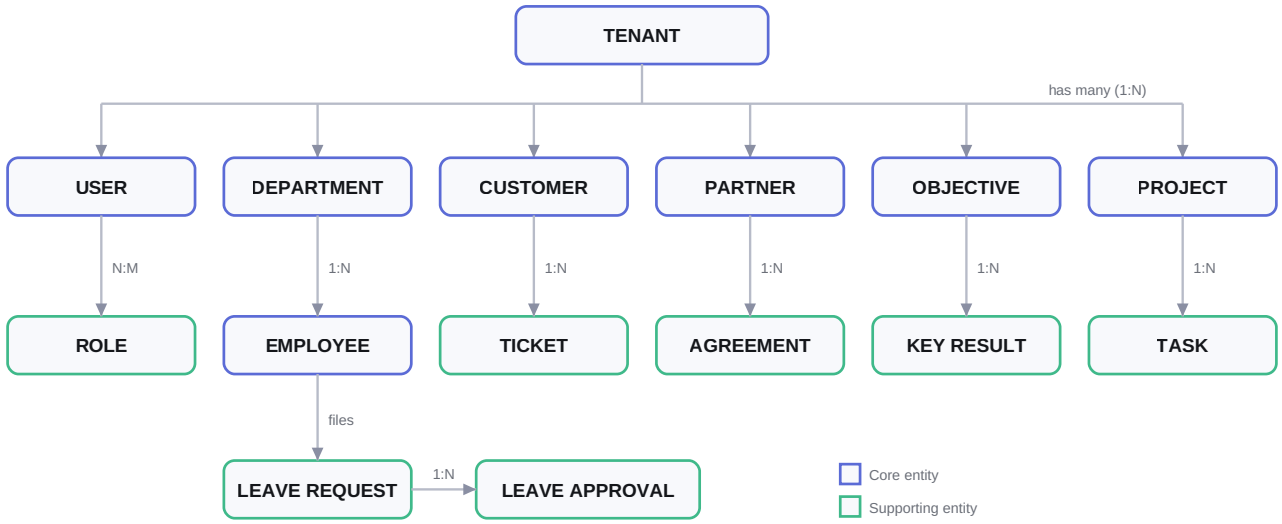

```
GET  /api/v1/employees // List with pagination/filtering
POST /api/v1/employees // Create
PUT  /api/v1/employees/{id} // Update
DELETE /api/v1/employees/{id} // Soft delete
POST /api/v1/leave-requests // Employee submits
POST /api/v1/leave-requests/{id}/approve // Line approver or HR, per current step
POST /api/v1/leave-requests/{id}/reject // Requires reason
POST /api/v1/leave-requests/{id}/return // HR returns for information
GET  /api/v1/partners // PRM directory
GET  /api/v1/objectives // EPM objectives and key results
```

22 Data Model & Architecture

All core tables include a `tenant_id` (UUID) for multi-tenant isolation.

ENTITY	DESCRIPTION	KEY ATTRIBUTES	RELATIONSHIPS
Tenant	Root organization	`id`, `name`, `subdomain`, `settings`	1:N to all
User	Login identity	`id`, `tenant_id`, `email`	N:M Role, 1:1 Employee
Department	Org unit	`id`, `name`, `head_user_id`, `parent_id`	1:N Employee, 1:N Project
Employee	HR profile	`user_id`, `department_id`, `manager_id`, `level`	N:1 Department, self-reference for reporting line
LeaveRequest	Leave application	`employee_id`, `type`, `dates`, `status`, `current_step`	N:1 Employee, 1:N LeaveApproval
LeaveApproval	One decision per step	`request_id`, `step`, `approver_id`, `decision`, `reason`	N:1 LeaveRequest
Customer	CRM client	`name`, `email`, `owner_id`	1:N Opportunity, 1:N Ticket
Partner	PRM organization	`name`, `category`, `tier`, `status`	1:N Agreement, 1:N Partner User
Objective / KeyResult	EPM goals	`owner_id`, `parent_id`, `target`, `progress`	Self-referencing cascade
Project / Task	Work items	`department_id`, `assignee_id`, `assigned_by`	Project 1:N Task
Ticket	Service request	`customer_id` or `partner_id`, `status`, `sla`	N:1 Customer / Partner

Entity Relationship Diagram

23 Non-Functional Requirements & SLAs

< 200ms API RESPONSE (P95, STANDARD CRUD)	**< 1.5s** FRONTEND INITIAL LOAD (FCP)
< 500ms SEARCH (UP TO 1M RECORDS/TENANT)	**5,000** GLOBAL CONCURRENT USERS (2,000 PER TENANT)
99.9% MONTHLY UPTIME	**< 1 hr / < 4 hrs** RPO / RTO

- **Encryption:** TLS 1.3 in transit; AES-256 at rest
- **Audit logging:** All create, update, delete, and login actions logged with `tenant_id`, `user_id`, `timestamp`, `IP`, `payload_diff`; retained 1 year

24 Development Roadmap

Change from v2.x: HR and CRM are the core product, so they now form their own phase directly after the foundation instead of sharing it with other modules.

Phase 1: Foundation & Tenant Provisioning

Goal: a secure, multi-tenant base with automated onboarding.

- Sign-up API and Celery provisioning (tenant, default roles, admin user, storage folder, welcome email)
- Auth: email/password, JWT, password recovery
- Organization management: branding, departments, **Admin appoints Heads of Department**
- Users and RBAC: invite users, assign roles, manage status
- **Module manifests, entitlements, and the Super Admin and Org Admin toggle screens**
- Core role-based dashboard

Phase 2: Core Product (HR and CRM)

- HR: employee profiles, reporting lines, attendance
- **Leave management with the two-part approval flow** (line approver, then HR)
- CRM: leads, contacts, customers, configurable sales pipeline
- Heads of Department dashboards and leave approval queue

Phase 3: Operations (Projects, Service Desk, PRM)

- Projects and tasks with assignment by Heads of Department
- Ticketing with SLAs, internal and external
- PRM: partner directory, onboarding, agreements, partner portal

Phase 4: Intelligence & Automation (EPM and Workflow)

- EPM: objectives, KPIs, scorecards, review cycles, executive dashboard
- Visual Workflow Builder with multi-step and role-based approvals
- Document management, notifications (email, SMS, push, WhatsApp), advanced reporting, integrations

Phase 5: Operations Services (optional, chosen per client)

- Procurement, Inventory, Sales, Finance, then Logistics, Planning, Manufacturing, and CX
- EPM budgets and forecasts when Finance is enabled
- Industry presets as service bundles
- A detailed PRD addendum is approved before this phase starts

Phase 6: Advanced Enterprise

- Mobile applications, public API and developer portal, marketplace
- Industry-specific extensions (for example HIPAA)

Services within a phase can be released independently. Phase 2 ships leave with a fixed two-step flow built into the HR module. Phase 4 moves it onto the configurable Workflow Engine.

25 Open Decisions

#	DECISION	CURRENT ASSUMPTION
1	Meaning of PRM and EPM	PRM = Partner Relationship Management; EPM = Enterprise Performance Management
2	Default leave rule	Line approver, then HR verification (HR-only is available by configuration)
3	Manager and Team Lead layers	Optional, off by default; Head of Department assigns directly
4	Who approves leave for HR staff, HR Head, and executives	As in the approval chain table in Section 08
5	Phase 2 leave implementation	Fixed flow in Phase 2, configurable in Phase 4
6	Countries and labor-law leave rules at launch	Tenant-configurable; no country templates yet
7	What belongs in the always-on core	Approvals, notifications, documents, item catalog, reference data; confirm whether Documents or Workflow are sold separately
8	Strictness of dependencies (for example Manufacturing requiring Inventory)	As in the Module Catalog table
9	Stock valuation method and accounting scope for operations services	Weighted average cost; prototype accounting only, no compliance claims

26 Product Positioning

> Enterprise Management Platform (EMP) is a configurable, modular SaaS platform that lets organizations of any size or industry manage their people, customers, partners, performance, projects, and services through one system that follows the organization's own hierarchy.

Unlike traditional ERP solutions, EMP **adapts to an organization's processes** instead of forcing the organization to adapt to predefined software workflows.
